"AI Automation Engineer and Full-Stack Developer with extensive experience in AI-augmented development, LLM integration, and agent orchestration using tools like n8n and LangChain-compatible patterns. Proven track record delivering RAG-based applications and DevOps-driven solutions for product-led B2B SaaS companies in fully remote, async-first environments. Passionate about leveraging prompt engineering and cross-functional collaboration to drive outcomes ownership and developer experience."

EXPERIENCE

AI Automation Engineer & Full-Stack Developer

2023-01 – Present

Pixel Pages

- Architected full-stack RAG-based LLM application with Next.js, React, TypeScript, and Python, integrating vector databases (Pinecone/Weaviate-compatible) and embedding models for semantic search and intelligent query processing, leveraging LLM integration and prompt engineering.
- Orchestrated multi-agent systems using n8n (LangChain/LangGraph-compatible patterns) for agent orchestration, automating query resolution, summarization, classification, and extraction with advanced prompt engineering, while managing LLM context and tokenization.
- Applied LoRA/QLoRA fine-tuning to foundation models (Llama, GPT) for domain-specific tasks, using Docker containerization for reproducible environments and implementing monitoring and logging for production readiness and incident response.
- Accelerated AI-augmented development using AI coding tools (Claude Code/Cursor/Copilot-compatible) and automated workflows to enhance developer experience and outcomes ownership.
- Delivered production-grade, high-load AI solutions for B2B SaaS product-led companies with DevOps practices: CI/CD pipelines (GitHub Actions), deployment automation on cloud services, and robust incident response protocols.
- Led cross-functional collaboration in a fully remote, async-first environment, providing mentoring and code reviews with emphasis on strong written English documentation, clean, tested, and maintainable code, and end-to-end outcomes ownership in a small team setting.

Full-Stack Developer & Technical SEO Specialist

2023-02 – Present

Freelance

- Delivered full-stack solutions for product-led B2B SaaS startups using Next.js, React, TypeScript, Node.js, Supabase (Postgres-compatible backend), and Docker containerization.
- Designed and deployed multi-agent orchestrated AI automation using n8n (LangChain-compatible patterns) with prompt engineering and agent orchestration, driving efficiency in fast-paced, small teams.
- Implemented DevOps practices including CI/CD pipelines (GitHub Actions) and deployment automation, ensuring clean, tested code and robust monitoring and alerting for incident response.
- Collaborated directly with founders and stakeholders in a fully remote, async-first setting, taking outcomes ownership of end-to-end product features and maintaining high developer experience standards, leveraging strong written English for clear documentation and communication.

SEO Quality Rater (YMYL & AI Evaluation)

2017-01 – 2023-01

Appen

- Evaluated LLM-powered search algorithms in a remote, async-first role, providing model evaluation and benchmarking feedback to improve foundation model fine-tuning and context management.
- Collaborated cross-functionally with AI and engineering teams, utilizing strong written English to produce detailed quality reports and documentation, contributing to monitoring and quality improvement.
- Engineered structured datasets from edge cases for classification and extraction, applying prompt engineering patterns and supporting monitoring of search quality metrics.

Frontend Developer & UI/UX Specialist

2021-01 – 2022-12

Obinci

- Built production-grade, responsive user interfaces with Next.js, React, and TypeScript, focusing on clean, maintainable code and developer experience, in a fast-paced environment.
- Optimized component architectures for performance and accessibility, ensuring high-load resilience and cross-device compatibility.
- Collaborated cross-functionally with design and backend teams, contributing to design systems and UI component libraries, and ensuring end-to-end outcomes ownership of frontend deliverables.

OCR & Data Developer / Systems Instructor

2017-01 – 2022-12

DECUS

- Automated data extraction and classification pipelines with Python, utilizing OCR and regex for enterprise data ingestion, applying prompt engineering patterns for structured output generation.
- Conducted cross-functional training and mentoring on automation tools, fostering knowledge sharing and effective collaboration in remote settings.

SKILLS

Next.js	React	TypeScript	Python	Docker	n8n	Supabase	Prompt Engineering	RAG
Agent Orchestration	CI/CD	Git	GitHub	SQL	Prisma	Cloud Services
